

“Education Prevents Litigation”

**INHOUSE SURGICAL INFECTION CONTROL
WORKSHOP**

Let’s work together for an aseptic positive result for your surgical procedures.

These workshops are conducted in dental surgeries

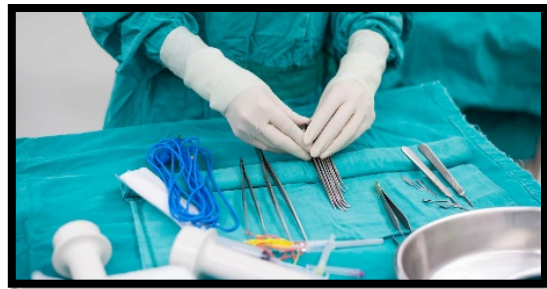

Do not miss this 2-hour training workshop opportunity for a professional yet fun and engaging learning experience to ensure aseptic technique when doing implants or a surgical procedure. You will be guided through the process during the training session.

In this workshop each participant will be given a surgical PPE kit (which the participant keeps) and are paired up to play both roles of a scout and scrub nurse. Informative presentation folders will also be given out on the day.

This course can also be run in conjunction with the **Inhouse Infection Control Training**

Training includes but is not limited to:

- Surgical hand scrub
- Gowning
- Surgical gloving
- Draping
- Surgical nurse training
- Scout nurse training
- Correct instrument set-up for procedure

We look forward to hearing from you to discuss conducting these fun and engaging training courses in your practice.
